Promised Killua

FULL-STACK SOFTWARE ENGINEER & WEB3 / AI DEVELOPER

Location: Lagos, Nigeria **Email:** promisedkillua@gmail.com **Portfolio:** promisedkillua.sbs

GitHub: github.com/collinstheegod376 **X:** @nerfed_killua **Telegram:** @nerfed_killua

EXECUTIVE SUMMARY

High-velocity **Full-Stack Software Engineer** with over **10 months of intensive production experience** engineering decentralized Web3 applications, multi-agent AI research systems, high-frequency market tape readers, and real-time multiplayer platforms. Deep expertise in modern TypeScript architectures (React 19, Next.js App Router, Vite, Tailwind CSS), on-chain cryptographic integrations (@solana/web3.js, noble/ciphers, biometrics/WebAuthn), local RAG companion extensions (Manifest V3), and reliable backend APIs (Node.js, PostgreSQL, Supabase). Proven capability delivering production-ready, security-audited code with exceptional UI/UX polish and sub-second load performance.

TECHNICAL PROFICIENCY

Core Languages:	TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend Architecture:	Next.js (App Router, Server Actions, SSR), React 19, React Native, Vite, Tailwind CSS (v3 & v4), Framer Motion, Figma
Backend & Databases:	Node.js, Express, PostgreSQL, Supabase, Prisma ORM, WebSockets, RESTful APIs
Web3 & Cryptography:	Solana Web3 (@solana/web3.js), SPL Tokens, Viem, Cryptographic Primitives (@noble/ciphers, @scure/bip39), Biometric Passkeys (WebAuthn), RPC Streaming
AI & Browser Systems:	Autonomous Agent Orchestration, Local RAG (Private Context Memory), Chrome Extensions (Manifest V3), Procedural Inverse-Kinematics Physics
DevOps & Testing:	Docker, Nginx, GitHub Actions (CI/CD Pipelines), Git, Jest, React Testing Library, Mobile App Store & Google Play Store Deployments

FEATURED PRODUCTION PLATFORMS & WEB APPLICATIONS

Lattice Lab — Autonomous Multi-Agent Materials Science OS

2026

Live URL: latticelab.fun | Next.js | Autonomous Multi-Agent | Materials Science R&D | Web3

- Architected a multi-agent virtual laboratory coordinating 7 autonomous AI agents executing an end-to-end scientific research loop: literature retrieval from arXiv, hypothesis formulation, atomic structure simulation, and evidence archiving.
- Engineered an interactive Operator Console, research publication archives, live token telemetry, and low-latency scientific data visualization dashboards.

SolTrace (Sol Tracer AI) — Conversational AI Solana On-Chain Scanner

2026

Live URL: soltracer.vercel.app | Next.js | Solana Web3 | Conversational AI | Tailwind CSS

- Engineered an open-source conversational AI blockchain scanner for Solana delivering real-time wallet tracking, interactive visual money flow diagrams, drainer risk security audits, and DEX swap analytics.
- Implemented automated bundle auditing, token intelligence pipelines, and visual transaction path analysis via natural language queries.

Allpad — Live Solana Market Flow Board & Tape Reader

2026

Live URL: allpad.online | React | TypeScript | Solana RPC | Order Book Tape

- Built a high-frequency Solana flow board tracking the top 10 busiest boosted mints by 24h turnover with sub-minute order depth updates.
- Engineered real-time session readouts highlighting volume breakouts, climb velocities, and market liquidity with a sharp, zero-fluff dark interface.

Anizuki — Real-Time Anime Trivia & Multiplayer Battle Arena

2026

Live URL: anizuki.sbs | Next.js | WebSockets | Multiplayer Gaming | Tailwind CSS

- Developed a real-time multiplayer anime quiz arena featuring live player lobbies, 6-digit PIN game rooms, instant head-to-head battles, and category playlists.
- Built real-time score synchronization, player achievement progression, and global competitive leaderboards.

Promised Killua — Full-Stack Software Engineer promisedkillua@gmail.com | promisedkillua.sbs

OPEN SOURCE SYSTEMS & PROTOCOL ENGINEERING

DOT — Sovereign Cryptographic Solana Vault (Open Source) 2026

GitHub: collinstheegod376/DOT • Live Demo: dot-eight-gilt.vercel.app Next.js 16 React 19 @solana/web3.js @noble/ciphers WebAuthn

- Architected a zero-server, self-custodial cryptographic vault where keys are generated, encrypted, and isolated strictly on the local device.
- Engineered biometric passkey authentication via device Secure Enclaves, air-gapped QR transaction signing, and native SOL / SPL token asset management.
- Eliminated all server custody vectors: "Dot holds no keys and runs no servers. Your funds, your device, your call."

Arachnos AI — Local-First Learning Extension & Visual Companion (Open Source) 2026

GitHub: collinstheegod376/Arachnos-AI Manifest V3 Local Private RAG Inverse Kinematics (60 FPS) Node.js

- Engineered a private, zero-cloud browser AI companion featuring 60 FPS procedural inverse-kinematic spiders crawling live web pages.
- Developed on-screen knowledge harvesting via silk tractor beams, private local vector memory, and real-time query answering with 100% provenance.
- Enforced zero cloud dependency, guaranteeing user browsing privacy and data sovereignty across all sessions.

Wheelrush & Orvix Solana Dev Radar 2026

Wheelrush: wheelrush.fun • Orvix: orvixagent.fun React Tailwind CSS Solana Status API

- **Wheelrush:** Built an interactive spin-to-win web game featuring realistic physics simulations, tiered prize algorithms up to $10B virtual cash, and persistent global leaderboards.
- **Orvix:** Created a Solana developer intelligence radar aggregating official incident reports and Agave software releases with live auto-refresh, local bookmarks, and raw JSON export.

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer | Freelance & Contract 10+ Months Experience

- Architected and delivered high-performance web applications, decentralized blockchain interfaces, and custom AI tools for clients globally.
- Ensured pixel-perfect implementation of Figma designs with strict performance budgets (sub-second load times, 95+ Lighthouse scores).
- Engineered end-to-end full-stack architectures combining Next.js/React frontends with Node.js/PostgreSQL backends and Web3 RPC providers.
- Implemented CI/CD automation with GitHub Actions, containerized microservices with Docker, and configured reverse proxies with Nginx.

Web Developer Intern | Creative Agency Contract

- Engineered foundational, high-converting responsive landing pages and component libraries supporting agency marketing initiatives.
- Collaborated in agile cross-functional sprints, diagnosing cross-browser rendering discrepancies and optimizing production assets.

EDUCATION & PROFESSIONAL PRACTICE

Software Engineering & Full-Stack Web Development Continuous Practice & Production Work

Intensive practical mastery in modern TypeScript ecosystems, decentralized finance protocols, generative AI multi-agent architectures, cryptographic systems, and scalable cloud deployments.
